

# Map

The Map component configures an interactive Google Map directly on a webpage. Maps add a little color and interactivity for standard "Contact" pages and can keep users on your site a little longer.

## Features

- Full suite of Google Map controls (zoom, Street View, layers)
- Destination directions
- Add multiple location markers
- Dimension controls
- Default zoom level

*Add interactive Google Maps for visual location and direction services*

## Pro Tips

- Use multiple location markers in lieu of multiple Map components
- Set the default zoom-to location to show any additional locations
- Use manual dimension controls fine-tune the space
- Accompany with additional 'inside' directions (e.g. Room, floor, etc)
